TAKE CARE

"Take care" is a project to develop a website which helps you to purchase palliative care products online. You can order according to your need, your time from anywhere through this site as usual like other sites. One of the benefits of this site is the Donor module that helps you to sell your used products through the same site using a different user id and password. The other two modules are user and admin module. The user can buy the products from anywhere they can provide the remarks of the product which helps other customers to purchase the products and admin can view the order details and can update the products in this site. If there is a donor for the product Admin act as a broker in between user and donor.

Objectives:

- It ensured data security
- It provides proper control of the officials
- It needs minimal time for various processing
- It has greater efficiency
